WORKING CONDITIONS
1. Ensure worksite is free of construction debris.
2. DANGER! Metal conducts electricity. Never use near any electrical current.
3. Inspect all power tools and extension cords to ensure they are not damaged. Damaged tools and cords can cause serious injury.

SPECIAL PRECAUTIONS
1. Inspect total system upon receipt and at least once each day or before each shift when in use.
2. Never use equipment with damaged or missing parts. Discard or contact manufacturer for repair or replacement.
3. Follow manufacturer’s instructions when using approved components with the Werner pump jack system.
4. Check all parts for good condition. Lightly lubricate moving parts occasionally.
5. Acids (hydrochloric, muriatic, etc.) and caustics (sodium salts, iodine, potassium, etc.) are corrosive to aluminum and can seriously affect its strength. Do not expose to corrosive substances.
6. Discard any components exposed to excessive heat or corrosive material.
7. Do not use in inclement weather or high winds. Windy conditions require extra caution. Scaffold platforms must be secured against wind uplift.
8. Ropes should be inspected and replaced at least once a year.
9. Use caution when working on soil, plywood should be used in order to form a solid plate under the Werner pole foot.
10. Pump upper foot lever to advance pump jack until it is approximately one foot past bottom of pole. Note: Lower foot lever may need to be disengaged to allow pole connector plate to slide past.
11. Secure scaffold platform to pump jack using the Cotter Pins supplied by Werner Co.
12. Use care when working on a roof of a structure. It is recommended to wear a safety harness and lifeline when working on a roof.

SYSTEM COMPONENTS
1. Make sure you read and understand the compatibility section of this manual.
2. Wooden poles may not be used with Werner aluminum pump jack systems.
3. See list of system components with model numbers below.

INSTALLATION OF PUMP JACK TO POLE
1. Place aluminum pump jack pole on ground with rubber pad facing upward.
2. Place pump jack on ground with platform support extending down toward ground.
3. Slide bottom end of pole (with V-shaped notch) through top of pump jack. Ensure pump jack platform support is facing the ground while pole's rubber surface is facing up.
4. Continue to slide pole through pump jack until pole is advanced past lower foot lever of pump jack causing lower foot lever to depress into rubber surface of pole. Note: Lower foot lever may need to be disengaged to allow pole connector plate to slide past.
5. Pump upper foot lever to advance pump jack until it is approximately one foot past bottom of pole.

INSTALLATION OF WORK BENCH TO PUMP JACK AND POLE
1. Remove nut and bolt from vertical members of work bench.
2. With same position on ground as when pump jack was assembled, slide work bench through top of pole with the work bench platform support extending up to same direction as pump jack pole rubber surface.
3. Reinstall lower nut and bolt through holes in work bench where they were removed as well as through blue connector plates of pump jack.
4. Work bench should ride on top of pump jack with its platform support extending opposite that of pump jack.

WARNING! DO NOT STAND OR SIT ON WORK BENCH. ALWAYS IN USE

INSTALLATION OF POLE TO WORK WALL
1. Install pole foot into bottom of pole. Ensure button locks are securely snapped into holes on pole.
2. Erect Pump Jack system on firm ground. When working on soil, plywood should be used in order to form a solid plate under the Werner pole foot.
3. Do not install pole on top of scaffold platforms or on roof surfaces.
4. Attach support braces to roof of structure to be worked on using at least four screws with a minimum holding strength equivalent to 1/4" x 3" type AB screws. (See Figure above).
5. The use of fall protection equipment is always recommended. Safety codes require guard rails and toeboards on all open sides and ends of scaffold platform.

INSTALLATION OF LOWER FOOT LEVER ON PUMP JACK
1. Slide lower foot lever through square holes in bottom support assembly of pump jack.
2. Ensure hole is installed through square holes on both sides of shackle assembly.
INSTRUCTIONS BEFORE USE. Failure to comply with these instructions may result in serious injury.

READ AND UNDERSTAND ALL INSTRUCTIONS BEFORE USE. Failure to comply with these instructions may result in serious injury.

ALUMINUM PUMP JACK SYSTEM

SAFETY AND ASSEMBLY INSTRUCTIONS

WARNING! READ AND UNDERSTAND ALL INSTRUCTIONS BEFORE USE. Failure to comply with these instructions may result in serious injury.

minimum of 1/2 inches. Support all overlap with rigid support. Platform overlap and overlap must meet OSHA and all applicable federal, state, and local codes.

3. Secure scaffold platform to each pump jack using chain and hardware provided. Chain shall be routed around scaffold platform rung and around each of the spacers, which are integral to the pump jack as shown in the figure below. Chain may be secured to platform support end plate using the provided chain quick link. A padlock may be used for added security.

4. Always install pump jack system so scaffold platform used for standing or working is level.

5. Do not install a scaffold platform more than 1' from working tool. There shall be no opening greater than 1/4 anywhere surrounding the working person.

INSTALLATION OF INTERMEDIATE BRACES TO POLE

WARNING! ANY APPLICATION OVER 12' REQUIRES THE USE OF INTERMEDIATE SUPPORT BRACES HAVING A MAXIMUM VERTICAL SPACING OF 16'. SOMEONE COMPETENT SHALL ENSURE THAT ALL BRACES ARE ATTACHED TO SOLID MATERIAL WITH ADEQUATE HOLDING POWER. A MINIMUM TORQUE OF 5 FT/LBS. SHOULD BE REQUIRED ON THE SCREW HEAD USED TO SECURE THE BRACE.

PASSING AN INTERMEDIATE BRACE

1. In order to pass a support brace that is already installed, a temporary support brace should be installed approximately 4 feet above support brace to be passed.

2. Worker should assume a position on scaffold platform which allows the first support brace to be released and reattached.

3. Release support brace from pole.

4. Once pump jack has been moved past the support brace, the support brace should be reattached to pole and the temporary support brace can be removed.

INSTALLATION OF POLE CONNECTOR TO JOIN POLES TOGETHER

1. Orient two poles with rubber facing in the same direction and v-shaped rubber protruding from top of lower pole to mate with v-shaped cut on bottom of upper pole (see figures below).

2. Insert pole connector into either top of lower pole or bottom of the upper pole allowing button lock on pole connector to engage into holes located on side of pole. It will be necessary to depress button locks so they can bypass end surface of pole. Ensure button locks are securely snapped into holes to lock pole connector in position.

3. Insert remaining exposed end of pole connector into second pole and ensure button lock is fully engaged.

4. Invert to ensure rubber surfaces mate together without more than a 3/8 gap and without overlapping or bulging.

RAISING SCAFFOLD PLATFORM

1. Ensure crank handle mechanism is locked into position with locking teeth engaged. Crank handle mechanism must be locked during use and raising of scaffold platform.

2. While standing on the scaffold platform and facing pole, place foot under the wrap on upper foot lever and pump to raise system until scaffold platform is raised approximately one foot.

3. Repeat procedure with additional pump jacks in system until desired height is reached. Maximum allowable working height is 48'.

WARNING! WORK MUST ALWAYS BE PERFORMED ON A LEVEL PLATFORM TO AVOID INJURY.

4. Return pump jack foot lever to fully up position for use.

LOWERING SCAFFOLD PLATFORM

1. While standing on scaffold platform and facing pole, confirm upper foot lever is in fully up position and crank handle mechanism is locked into position.

2. Using right foot fully depress upper foot lever.

WARNING! PRESSURE MUST BE MAINTAINED ON UPPER FOOT LEVER DURING STEP 3. FAILURE TO MAINTAIN PRESSURE WILL ALLOW THE UPPER FOOT LEVER TO RISE RAPIDLY UPWARD AND MAY CAUSE INJURY.

3. While holding onto pole, place left foot on lower foot lever. Push and hold to point of release.

4. Rotate crank handle outward to disengage locking teeth.

5. Rotate crank handle in a clockwise direction to lower system approximately one foot.

6. Rotate crank handle back into locked position with teeth engaged. Release lower foot lever to re-engage. Ensure upper foot lever is returned to fully up position.

7. Repeat procedure with additional pump jacks in system until desired height is reached.

GENERAL USE

1. Only trained personnel shall erect and/or use this equipment.

2. Examine erected system thoroughly to ensure it is set up properly.

3. Make sure pump jack system installation does not violate any federal, state, or local codes.

4. Never overload system! Maximum load not to exceed load capacity of lowest rated component in system. See other labels and instructions.

5. There should never be more than two people on pump jack system between any two poles.

6. Never drop or apply an impact load to system components.

7. Do not use ladders on scaffold platform or on pump jacks.

8. Do not accumulate materials or debris on scaffold platform.

9. Remove foreign substances such as mud, grease or oil from shoes and all system components.

10. Do not use ladders to climb onto or off scaffold platform unless ladder and platform are secured against movement.

PROPER MAINTENANCE, CARE AND STORAGE

1. Consult manufacturer to replace worn system components.

2. Always keep components clean of all foreign materials.

3. Properly support and restrain pump jack system components in transit or storage.

4. For additional care, use, and safety instructions, contact your employer, dealer or the product manufacturers. See additional labels on system components.

WARNING! FAILURE TO COMPLY WITH THESE INSTRUCTIONS MAY RESULT IN SERIOUS INJURY.
